Abstract (en)
[origin: WO2013026204A1] The present invention relates to an antenna assembly for wireless communication systems, comprising an antenna part and an antenna signal processing part together forming an integrated antenna assembly; said antenna part comprising at least one antenna element adapted for receiving/transmitting wireless communication signals, and said antenna signal processing part comprising at least one processing unit adapted for signal processing communication signals to and/or from said at least one antenna element; wherein said antenna part and said antenna signal processing part being attached to each other and separated from each other by means of an intermediate cover (C) located between said antenna part and said antenna signal processing part; and said antenna assembly further comprises a first gasket (G1) and a second gasket (G2) for sealing said antenna assembly, said first gasket (G1) being arranged to act in a first direction (D1) on said intermediate cover (C), and said second gasket (G2) being arranged to act in a second direction (D2) on said intermediate cover (C), said second direction (D2) being substantially opposite to said first direction (D1).
