Abstract (en)

[origin: WO2012110738A1] The invention relates to a device for joining the end (3a) of a shielded coaxial cable (3) and a metal connector (10), said cable comprising a peripheral metal braid (4) and an axial conductor (2), and comprising a conductive overmoulding (5) that at least partially surrounds the end of the shielded cable (3) and one end of said connector (10), said overmoulding making contact with said metal braid (4) and said connector (10), so as to ensure the continuity of the electromagnetic shielding of the connection. The invention also relates to a method for producing such a connection.
