Abstract (en)
[origin: WO2012110559A1] The invention relates to an LED module and to an operating device for detachably connecting to the LED module, wherein the operating device comprises a power provision interface and a memory access interface, wherein the operating device further comprises an electronic ballast which is connected to the power provision interface of the operating device, wherein the electronic ballast provides a supply power for the LED module at the power provision interface with at least one adjustable operating parameter, wherein the operating device is further equipped to receive module information from a module memory of the LED module via the memory access interface, wherein the electronic ballast adjusts the operating parameter depending on the received module information.
