Abstract (en)

The present invention relates to personal appliances and is concerned with a beneficial method for operating such personal appliance and the required technical features. In particular, the invention concerns a personal appliance for performing a grooming task on a user, the appliance being able to perform the grooming task in at least a first mode or in a second mode, which is different to the first mode, the personal appliance comprising at least one sensor for measuring user data relevant to the grooming task, the personal appliance further comprising a user interface enabling the user to enter further user related data relevant to the grooming task and the personal appliance comprising a data processing unit, the data processing unit generating a selection signal for at least either the first or the second mode depending on the data measured by the at least one sensor and depending on the user related data entered.
