Abstract (en)
Test device (1) for testing a human or animal sample, such as blood or blood components, comprising a first part (2) and a second part (3), comprising cooperating first and second coupling elements (4, 5) for coupling the first part with the second part, and a sample absorbing and/or adsorbing element (17), wherein the first part comprises a fluid reservoir (20), and wherein the second part comprises at least one receptacle, wherein the fluid reservoir is reducible in volume for forcing a liquid contained therein through and/or along the adsorbing and/or absorbing element, forcing the sample such as blood or components thereof from the adsorbing and/or absorbing element into the receptacle, preferably into contact with at least one reagent (16) in the second part when the first and second part are connected or brought into connection with each other by at least the first and second coupling elements.
