Abstract (en)

[origin: EP2676895A1] The box (B) has a peripheral edge comprising junction elements (2-4) placed consecutively on a circumference of bottom and a cover (1) of the box. A part of the junction elements is secured to each other by external connection parts formed of hinge parts (5) and lock parts (6). The connection parts are removable on a circumference of the box, and the elements are disconnected from the peripheral edge of the box. The elements are placed on a same height level on the circumference of the box and placed consecutively. The elements are connected to the bottom of the box. An independent claim is also included for a method for manufacturing a modular packing box.
