Abstract (en)
The invention relates to an elevator guide shoe (24) comprising a guide shoe base supporting a guide roller arrangement, in which at least two guide rollers (46, 48) having parallel rotation axes are provided, whereby the circumferences of the guide rollers are/can be spaced apart by a distance as to take up a guide rail part of an elevator in between, and wherein the guide shoe base further supports at least one slide shoe (54) with a sliding surface, which slide shoe is located on one side of the guide rollers with its sliding surface extending in a plane perpendicular to the guide roller axes. The slide shoe as well as the guide roller arrangement are located on a common carrier element (38), which is releasably fastened to the guide shoe base (30, 32, 34, 36). This guide shoe allows easy mounting and maintenance of all wearing parts of the guide shoe.
