Abstract (en)

Assembly for mounting a reservoir in particular a swimming pool to the ground surface, or for wholly or partially burying thereof, consisting of beams (7, 8, 9, 10, 11, 12) stacked together, having an adaptively laying model (25) with markings of exact location for the attachment of pillars (1, 2), preferably of tubular section, with tabs at the top and bottom (22, 23), a profile (21) able to simultaneously receive the anchoring profile (19, 20) for the waterproof and malleable pouch, a border (14, 15, 16, 17), end beam (9), mirrors (37) and a metal sheet (36). This technology reduces the risk of inaccurate placement of the pillars during the mounting of the assembly, thus optimizing the levelling and vertical setting thereof, with a connection profile of the different elements of the assembly.
