Abstract (en)
[origin: EP2677257A2] The device has a heating element (5) e.g. infrared heating element, for generation of heat. A suction head (1), a suction hose (2), a suction channel (6) and a wet suction device are provided for suction of ice crystals and/or developed water vapor and/or warm air. The generation part is designed as a heating rod and/or as infrared radiators and/or a warm air flow unit. The generation part allows selective and punctual heating of a floor (4) to be defrosted. A part of the device selectively moves over the floor. The floor is covered with an ice sheet (3).
