Abstract (en)

This application discloses a method for operating a vehicle sensor device 1 between a sleep mode and an active mode. The method comprises generating an input signal by the photoelectric cell; and activating, provided that the input signal lies within a predetermined interval, a sensor 14, 15 in the vehicle sensor device, thereby setting the vehicle sensor device in the active mode. The application further discloses a vehicle sensor device 1 comprising a photoelectric cell 10, a controller 13, and at least one sensor 14, 15. The components are arranged to perform the method for operating the vehicle sensor device 1 between the sleep mode and the active mode.
