Abstract (en)

[origin: WO2012113745A1] The invention relates to equipment for depositing a film of ordered particles (4) on a moving substrate (38), the equipment including: a transfer area (14) including a particle inlet (22) and a particle outlet (26) spaced apart from each other by two opposite side rims (28), and retaining a carrier liquid (16) on which the particles are floating; and a capillary bridge (42) providing the connection between the carrier liquid (16) contained in the transfer area (14) and the substrate (38). According to the invention, the equipment comprises a plurality of suction nozzles (32a, 32b) capable of drawing the particles (4) toward the two side rims (28).
