Abstract (en)  
[origin: WO2012113443A1] The present invention discloses an apparatus (100) for supporting a tool from a support structure. The apparatus (100) includes a body (102), a clamping member (124) for releasably securing the body (102) to the tool, and a ring member (104) pivotably connected to the body (102). The ring member (104) is movable between an idle position and a working position, the ring member (104) being adapted to engage with the support structure in the working position. Moreover, the ring member (104) is secured in both the idle position and the working position.
