Abstract (en)
[origin: WO2012113734A1] The invention relates to a package having flexible walls, such as a sachet or an external pouch made of plastic, which is intended to contain a first product and at least one flexible internal pouch which can be ruptured or torn and contains a second product, preferably liquid, which is intended to be mixed with said first product in said sachet or said external pouch. The internal pouch is secured to an essentially rigid panel which has a preferential folding line that may be provided with a cut-out that projects at the moment of folding.
