Abstract (en)
[origin: CA2824928A1] The invention relates to a sea container (10) that can be closed on all sides, comprising a base frame (28), which has four corner posts (44, 46, 48, 50), a top-side frame (32), and a bottom-side frame construction (42), wherein the corner posts are rigidly connected to the top-side frame (32) and to the bottom-side frame construction (42). The bottom-side frame construction (42) has a bearing frame (52), wherein installations in the container (10) are fastened to the bearing frame and the bearing frame (52) has tie-down means (54) for tying down and for absorbing forces acting horizontally. Thus the invention makes it possible to accommodate installations such as a deploying device for a trailing antenna in a sea container even though traditional sea containers are unsuitable therefor.
