Abstract (en)
[origin: WO2012113360A1] The invention relates to a compact shaped body, comprising a textile or paper-like sheet material that can be unfolded. The sheet material comprises a plurality of layers and is held together in a compact form by a binder. The sheet material is activated in the manner of an active ingredient, for example cationized and/or provided with an active ingredient. The sheet material is present in tablet form or preferably in ball form and can be used among other things as an additive in the washing of laundry for removing dirt and stray dyes, for dispensing detergents and washing aids such as bleaches, and for dispensing active ingredients in a controlled manner.
