Abstract (en)

[origin: WO2012114269A1] The present invention relates to a washing machine, wherein a filter (3) for water taken in from the main or recirculated from the tub can be selectively extracted together with the drawer (1) for loading the washing agents. Cleaning and replacing the filter (3) are thus made easier, because it is possible to extract it together with the drawer (1) only when necessary. During the normal operation of the washing machine, the filter remains housed in a separate position with respect to the drawer.
