Abstract (en)
[origin: GB2488176A] A panel element for use in constructing a shelter is disclosed. The panel element comprises a body portion, first locking means mounted to the body portion, and second locking means mounted to the body portion. The first locking means comprises an elongate member having a plurality of apertures therein, and the second locking means comprises a plurality of locking elements moveable relative to the body portion between a storage position and a deployed position. In the deployed position, the locking elements engage respective apertures of a first locking means of a further panel element to urge the further panel element towards the first panel element. The panel may include insulation and a ballistic layer. A secondary barrier is also provided comprising a pair of flexible sheets connected by flexible tensile members to define a plurality of chambers for receiving filler material (see figures 15a-d)
