Abstract (en)
[origin: WO2012113613A1] The present invention relates to a running gear (1) for a sliding door (100) for guiding the sliding door in a running rail and comprising a frame of the running gear (3) with an upper side (3a) and a lower side (3b), a fastening device (5) for fastening the running gear (1) to a door leaf (100) of the sliding door, and a roller (11) mounted on an axle (9), the axle (9) being arranged on the frame of the running gear (3). The frame of the running gear (3) comprises a long hole (13) for receiving the axle (9) of the roller (11). A height-adjustment device (15) is arranged on the axle (9), via which the position of the axle (9) in the long hole (13) can be adjusted when the running gear (1) is in a guided mode to the running rail. The height-adjustment device (15) comprises an operating element (23) on the lower side (3b) of the frame of the running gear (3).
