Abstract (en)

[origin: WO2012115585A1] The invention relates to an arresting device for at least one Venetian blind cord (4), the arresting device (2) comprising a housing (6) and a at least partly inside the housing (6) within a chamber (20) arranged operating element (8) arranged to be able to be displaced in a reciprocating motion inside the housing (6), the arresting device (2) further comprising a resilient element (10) arranged to exert a parting force (F) between the housing (6) and the operating element (8), where the housing (6) is arranged with a slit (30) and the operating element (8) is arranged with a recess (32) which slit (30) and which recess (32) extend essentially transversally to the direction of movement (A) of the operating element (8) within the housing (6), where the slit (30) and the recess (32) are arranged to be able to be set so that they border on each other by pushing in the operating element (8) within the chamber (20) of the housing (6) against the force (F) which is exerted by the resilient element (10) whereby a stretched Venetian blind cord (4) is arranged to be able to be introduced from the outside of the housing (6) transversally to its extension (B) via the slit (30) into the recess (32), and where the force (F) which is exerted by the resilient element (10) is arranged to push apart the housing (6) and the operating element (8) when the operating element (8) is released whereby the Venetian blind cord (4) is arranged to be jammed and arrested between the housing (6) and the operating element (8).
