Abstract (en)
[origin: WO2012113391A1] Vehicle, in particular military vehicle, having a drive unit (11), a drive unit heating circuit (10) for controlling the temperature of the drive unit (11), a power generator (21), which has an auxiliary motor (23), and having a power generator heating circuit (20) for controlling the temperature of the auxiliary motor (23), wherein the power generator heating circuit (20) can be coupled to the power unit heating circuit (10) in order to exchange heat thermally. Method for controlling the temperature of a vehicle component (11, 22, 23, 41, 44) of a vehicle, in particular of a military vehicle, having a drive unit (11), a drive unit heating circuit (10) for controlling the temperature of the drive unit (11), a power generator (21), which has an auxiliary motor (23), and a power generator heating circuit (20) for controlling the temperature of the auxiliary motor (23), wherein heat is exchanged between the power generator heating circuit (20) and the vehicle component (11, 22, 23, 41, 44).
