Abstract (en)
[origin: US2012217274A1] A fashionable unisex personal item carrying device combines the aesthetic pleasure of suspenders or a gun holster, with the functionality of a small tote or purse being worn over the shoulders, like a backpack, with hanging pockets, suspended from the bottom of the strap, and is disclosed. Two shoulder straps are connected by a bridge spanning across the wearer's back, below the shoulder line. Detachable pockets are sleek enough to stylishly hold male items such as cell phones, wallets, and money clips, while still being able to satisfy the needs of the modern young woman by having the storage capability of concealing such large items as mirrors, makeup, lip-glosses, feminine hygiene products, business cards, combs, and mints. Systems and combinations of the involved elements are likewise taught according to the teachings of the present disclosure, for allowing users to customize, accessorize, and/or leverage electronic interfaces for design, including radiation shielding embodiments in the style of a Faraday box.
