Abstract (en)

[origin: WO2012168581A1] The invention relates to an appliance for dispensing pre-cut wiping material wound into a roll, of the type comprising a casing (1) that holds a roll (E) of wiping material, said casing comprising a base wall (1a), two side walls (1b) and a supporting wall (1c) for the roll of material, said walls (1a), (1b), (1c) forming the outside walls of the casing, said casing holding a flap (2), articulated with respect to the casing, for guiding and unrolling the roll of material, and a cover (3), articulated with respect to the casing, that defines after closure a space between said flap and said cover in order to allow the output of the strip of material, said flap and said cover defining a space between one another for the guidance and output of the strip of material and for separating a sheet of material, said appliance being noteworthy in that the supporting wall (1c) for the roll of material has a profile comprising a central horizontal part (1c1) and, on either side, two oblique parts that are raised towards the front (1c2) and the rear (1c3) for holding, centring and keeping the roll (E) of material stabilized, and in that the front oblique part (1c2) is joined by way of its bottom part to the horizontal supporting part (1c1) and is set back with respect to the front end of the casing in order to define a volumetric space with the flap (2), allowing the operator to introduce and position his fingers in order to grasp the strip of material unwound from the roll in order to dispense a sheet of cut material.
