Abstract (en)
[origin: WO2012116840A1] The invention relates to a power tool separation device, in particular a manual power tool separation device, comprising at least one cutting unit (12), at least one guide unit (14) which forms a closed system together with at least the cutting unit (12), and at least one torque transmission element (16) for driving the cutting unit (12) which is at least partially mounted by means of the guide unit (14). According to the invention, the torque transmission element (16) is arranged such that it can be moved in the guide unit (14) at least in the non-coupled state, at least transverse to the cutting direction (18) of the cutting strand (12) and/or along the cutting direction (18).
