Abstract (en)

[origin: WO2012116895A1] The invention relates to a method and device for inputting a train data sequence, in particular train number, driver's number, braking capacity, train length and maximum speed of train, into an ETCS vehicle unit. In order to speed up the inputting of train data and avoid input errors, there is provision that the train data sequence is stored as a data record and that the data record is input with a single push button operation (6).
