Abstract (en)
[origin: CA2827996A1] The invention relates to a motor vehicle door lock which is equipped with a locking mechanism (1, 2) and a closing/opening device (7 to 16). Said closing/opening device (7 to 16) has at least one drive (7 to 11 and 13, 14), at least one transfer element (12, 16) and a driving pawl (16). The drive (7 to 11 and 13, 14) serves to open or close the locking mechanism (1, 2), the respective transfer element (12, 15) acting upon the driving pawl (16). According to the invention, a mechanical and/or electrical opening drive (7 to 11) and a mechanical and/or electrical closing drive (13, 14) are designed to have an associated opening transfer lever (12) and an associated closing transfer lever (15), respectively. The opening drive (7 to 11) together with the opening transfer lever (12) is designed, complementary to its opening function for the locking mechanism (1, 2), also to disrupt a closing function initiated by the closing drive (13, 14) in conjunction with the closing transfer lever (15).
