Abstract (en)

[origin: WO2012117177A1] Fabrication of an inertial sensor comprising at least one measurement beam (23) and an active body formed of a proof body (13) and of deformable blades (14), said active body being maintained in suspension inside a hermetic enclosure via its blades (14), the measurement beam (23) linking a part of the proof body (13) to an internal wall of said enclosure, said measurement beam (23) exhibiting a thickness less than that of the proof body (13).
