Abstract (en)
[origin: CA2821276A1] The invention relates to a high current connector for transmitting electric currents, comprising a housing made of electrically conductive material, which is designed for mechanical and electrical connection to a cable and has an open side for the insertion of a matching plug connector (4) made of an electrically conductive material, and comprising a contact element (5) which is disposed and formed in the housing in such a way that it produces an electrical contact with a contact surface and contact pressure between the housing and the matching plug connector (4) inserted therein, wherein the contact element (5) has at least one annular helical spring (5).
