Abstract (en)
[origin: WO2012117578A1] The present invention addresses the problem in which a smoker is unable to take in 100% of the evaporated nicotine in a smokeless smoking jig in which a genuine, unaltered cigarette having a filter is used, and nicotine is caused to evaporate from the tobacco leaves without lighting the product, allowing the evaporated nicotine to be inhaled. In view whereof, this mouthpiece is provided with an airflow adjustment structure or an airflow adjustment component, or is combined with a tobacco inlet tube, whereby the intake proportion of nicotine evaporated from the tobacco leaves can be changed.
