Abstract (en)
[origin: EP2682023A1] The fitting structure (1) has a fixed element (2) that is fastened rigidly to a main portion of a pull-out cabinet. A pull-out element (3) which is shorter than the fixed element is moved between a push-in position and a pull-out position. The rollers (18,23) are rotated for guiding the pull-out element at the fixed element over three axles. The pull-out element is pushed away in the push-in position and not in the pull-out position over the rollers at the fixed element. The rollers are supported at the pull-out element around the axles. An independent claim is included for a pull-out cabinet.
