Abstract (en)
[origin: EP2682090A1] The massage device (1) has a device (5) that is arranged for generating deformations of a rubber-elastic outer sheath (3). The device is provided with eccentric wheels driven by an electromotive drive (4). The wheels are provided with freely rotatable roller wheel supported on an eccentric bearing pin. The roller wheel is acted on the inside of sheath and provided to move the sheath radially towards a massage section (2). The sheath is connected with the ends of plungers (8) facing towards the sheath or with the roller wheel during the deformation of sheath.
