Abstract (en)

[origin: EP2682516A2] The machine has a trough region (4) provided with a heating device (6) working over a trough surface (5), which comprises a channel space (7) arranged at a rear part of a trough outer surface. The channel space is connected with an input channel (8) utilized for inflow of heating medium i.e. hot gas. An output channel outputs exhaust air flow and/or effluent gas flow. A control device is provided at the output channel. The control device directs hot gas flows into a heat required region for controlling heat distribution in the channel space.
