Abstract (en)

[origin: EP2682541A2] The system (10) has a set of fasteners (13) arranged to allow a adjustment of positioning in rotation of a connection base (12) relative to ground (11) in a vertical direction (Z). Another set of fasteners (14) ensures an element to be fixed on the base. The latter fasteners are arranged to allow adjustment of positioning in translation relative to the ground according to the direction, where the system is arranged such that assembly of the element on the base is performed by carrying out the positioning adjustment in translation of the element. Independent claims are also included for the following: (1) an arrangement (2) a method for fixing an element on a ground.
