Abstract (en)
[origin: EP2682544A1] The device (1) has with a bolt element and a trap element that are triggered automatically during the movements between a closed position and an open position in automatic mode. An actuator device is cooperated with bolt element and trap element in manual mode, such that bolt element and trap element are triggered during the movement between the closed position and the open position. An unlocking device is blocked in automatic operation by stop element and is resolved in manual operation by stop element in closing position.
