Abstract (en)
[origin: EP2682546A1] The arrangement (1) has a lid (13) movable between an open position and a closed position relative to a storage body (7). A locking mechanism (15) comprises a lever (33) and a locking element (35). The lever is movable between a locking position and a release position relative to the body. The lever cooperates with the locking element for locking the lid in the locking position, and the lid is freely moved from the closed position to the open position relative to the body in the release position. A bistable spring (37) selectively urges the lever towards the locking or release position.
