Abstract (en)

[origin: EP2682556A1] The arrangement has a switching element that is switched on and off by an automatic lowering mechanism (9). The automatic lowering mechanism has two parts (70, 72), where one of the parts is movable relative to the other part, and the arrangement is automatically lowered by a common movement of the two parts. A connection between the two parts is interrupted, so that movement of one of the parts has no effect on the other part and remains with the automatic lowering mechanism and a sealing element (5) remains in a raised position.
