Abstract (en)  
[origin: EP2682610A1] The system (S) has a main stage (11) i.e. pressure-servo-controlled 3/2-way-control valve (12), fixed to a pressure line (8) and a return-flow line (19) for controlling control pressure acting at control cylinders (Z1, Z1'). A pilot valve is attached to the stage for controlling pressures, torque and/or volume. The pilot valve is connected to a pressure signal line (21) that is guided to pilot pressure control of the control valve at an inlet side. The pilot valve is attached to a low-pressure area and connected to the cylinders for quantity- and/or rotational torque control at an outlet side. The pilot valve is designed as a flow control pilot valve (24), a torque control pilot valve (25) and a pressure regulating pilot valve (34).
