Abstract (en)
[origin: WO2012120212A1] The invention relates to a folding chair (1) capable of being moved between a folded position and an unfolded position, including: two units, each of which includes first (10, 12) and second (18, 20) tubes hinged together via a hinge pin (23); and a canvas sheet (4), characterized in that each assembly of two tubes comprises a rigid part (32) at the hinge pin thereof, said rigid part being arranged between the two tubes (12, 18) and having: a groove (40) for receiving a tube (12) of the assembly without any degree of freedom; first and second cradles (56, 61) arranged on either side of the hinge pin (23), such that when the chair (1) is in the unfolded position, the first cradle (56) bears against the upper section (18a) of the other tube (18) and the second cradle bears against the lower section (18b) of the other tube (18).
