Abstract (en)
[origin: WO2012119845A1] The invention relates to a dishwasher (1), comprising a dishwashing compartment (2), at least one dish rack (3, 4), which can be moved out of the dishwashing compartment (2) and into the dishwashing compartment (2), and at least one pull-in device (15) having a mechanical energy store (22) for at least semi-automatically moving the dish rack (3, 4) into the dishwashing compartment (2). By moving the dish rack (3, 4) out of the dishwashing compartment (2), the energy store automatically takes up energy and automatically gives off said energy again when the dish rack (3, 4) is moved into the dishwashing compartment (2) so as to at least support the inward pushing of the dish rack (3, 4).
