Abstract (en)

[origin: WO2012119166A1] In a process and a device for producing a metallic strip (2) having at least two strips (24, 24', 25, 26) of differing thickness running in the longitudinal direction of the strip (2) with the aid of rollers (10, 16), between which the strip (2) is passed and in the process a strip (24, 24") of reduced thickness is produced by a rolling operation, working rollers (16) mounted on a planetary gear (9) are moved in the direction (21) counter to the conveying direction (20) of the strip (2) during the rolling operation.
