Abstract (en)

[origin: WO2012120076A1] The invention relates to a device and method for increasing the safety of a motor vehicle. A first sensor unit (2) detects the environment, in particular free spaces and objects (0) and the position and motion of said objects. A second sensor unit (20) detects the environment state, a third sensor unit (30) detects the vehicle state, and a fourth sensor unit (40) detects the driver specifications. The data are amalgamated. According to the invention, a driving safety coordinator (6) is provided, which calculates the risk of collision on the basis of a risk evaluation, and the driving safety coordinator (6) determines pre-collision phases (P1, P2, P3, P4a, P4b) of the motor vehicle (1) with regard to the object (0).
