Abstract (en)
[origin: WO2012122576A1] The invention relates to a construction element as a heat insulating termination of a roof construction, which has a guiding device (3) that drains off or repels rain water and a fastening device (4) for fastening or supporting the construction element (1), wherein the construction element (1) is produced from one piece as a molded part and both the guiding device (3) and the fastening device (4) are designed or formed as components of the molded part (1). The molded part (1) is made of a material having high thermal insulation and consists in particular of an extruded polystyrene material.
