Abstract (en)

[origin: WO2012123352A1] The invention relates to a light that comprises communication means for exchanging information, said communication means being designed to exchange information with a plurality of lights in a wireless manner, particularly using a radio signal. Said light is additionally designed to select an operating state on the basis of an item of selection information that a light wirelessly receives by means of said communication means, said selection information preferably being in the form of broadcast information.
