Abstract (en)
The device has a cabin (1) to receive passengers, a guidance system, a cable traction system (3), where the guidance system is constituted of a single central rail (2) on which roll wheels are arranged interdependent of the cabin. The cable traction system is placed on the cabin. The traction system includes two cables that are placed on each side of the cabin. The cabin is hung in a fixed manner on the cable traction system. The cable is arranged in a closed-loop, where the traction system presents covering zones.

Abstract (fr)
Le dispositif de transport selon l'invention comprend une cabine (1) pour recevoir des passagers, un système de guidage et un système de traction par câble, il est caractérisé en ce que le système de guidage est constitué d'un rail (2) central unique sur lequel roule des roues (10) solidaires de la cabine (1). Ainsi il n'y a plus de mur latéral pour soutenir le ou les rails (2) de guidage ce qui permet de limiter la largeur de la voie neutralisée par le dispositif. Les roues (10) de la cabine (1) peuvent être situées latéralement de chaque côté du rail (2) central.
