Abstract (en)

[origin: EP2685022A1] The wind suction backup module (1) has an engagement portion (2) that is provided with a leg (3) for engagement with a support of the roof or facade structure. A holder (4) is configured for holding the engaging portion. A connecting portion is configured for connecting the support with a flashing portion (23). The engaging element in the holder is held along a sliding movable shaft and leg is spaced apart from the sliding movable shaft. An independent claim is included for flashing portions.
