Abstract (en)

The unit has a lock (1) arranged on a side of a body, where a door wing-side arranged door bracket (4) engages into the lock and is lockable in the lock. The door bracket is received in a support plate (6) that is arranged in a plane vertical to an operation direction of the door bracket floating in a door wing-side inserted support. The door bracket is swingably retained in a door side flange plate (5) at a small degree of angle. The flange plate is connected with a material of the support plate over a break section (31). Alignable elements are located on the support plate.
