Abstract (en)

A socket for electric vehicles comprises a body (1) suitable to receive a corresponding plug (2) that substantially takes up all the space available inside the body (1), in which there are arranged a plurality of longitudinal cylindrical housings (3) in some of which there are provided metal sleeves (4) acting as live contacts, as well as a pair of covers (5) arranged outside the body (1) and provided with terminal portions (5b) that penetrate the body (1) through corresponding slots (1a) and extend inside the cylindrical housings (3) containing the metal sleeves (4) so as to cover the live contacts, the covers (5) being moved from said working position, to which they are biased by springs (10), to a rest position, in which the terminal portions (5b) are outside the body (1), by a cursor (9) projecting inside the body (1) and suitable to be moved outside the body (1) by the plug (2) upon insertion of the latter into the socket.
