Abstract (en)
[origin: WO2012125042A1] Inclination device for furniture including a bottom part (2) and an upper part (1) connected through inclination means (3,4; 15) provided to incline the upper part in relation to the bottom part. The bottom part (2) includes two elongated base portions (7) at a distance from each other. The base portions are either freestanding, connected to each other with a bar, or connected to each other with a bar, or several bars, at a distance from the ground level when the upper part is inclined. The inclination means (3,4; 15) is adapted to lift a first side of the upper part and to move the opposite side in a horizontal direction towards the first side.
