Abstract (en)  
[origin: WO2012125698A1] In some embodiments, the present invention generally provides self-adjusting gastric banding systems (1100) for the treatment of obesity and obesity related conditions, as well as systems for allowing the automatic self - adjustment of gastric bands when a patient swallows a large bolus. In some embodiments, the present invention generally provides for gastric banding systems having a satiety booster (1117), for example, to increase satiety levels when a patient desires to curb appetite at a particular time. In some embodiments, the present invention may provide for gastric banding systems that allow for both the automatic self - adjustment of gastric bands when a patient swallows a large bolus and an incorporated satiety booster for increasing satiety levels when a patient desires to curb appetite at a particular time.
