Abstract (en)  
[origin: WO2012123689A1] The invention relates to a packaging for unit pharmaceutical products, comprising: a receiving element (3) having at least one cell (7) defining an inner space (9) configured so as to receive such a product (2) and an opening (9) to said space; an element (10) for covering said cell, fixed to said receiving element in the region of the opening and designed so as to be torn or removed in order to extract said product; and a repositionable temporary closing body (22) designed such that it occupies a determined initial position from which it can be removed and at least one temporary closing position wherein it is temporarily fixed by adhesion to said element around said opening to the space of said previously opened cell; said determined initial position being separate from said closing position and said temporary closing body having an at least partially pre-glued closing part (23)
