Abstract (en)

[origin: WO2012122580A1] The invention relates to a tool-positioning device (22) for at least two tool positions (19, 20) for at least one tool set (10, 11) comprising a tool clamping adapter (16) and at least one bending tool (15), wherein said tool positions can be optionally fixed in the direction of a length (18) of a tool bar (2) of a bending press (1). The tool bar (2) comprises for each tool position (19, 20) a pair of claw-shaped positioning elements that are spaced apart in the direction of the length (18) of the tool bar (2) and are spaced from each other by an adjustment range (55) of the tool set (10, 11). The tool clamping adapter (16) is adjustably mounted in a holding slot (32) running in the direction of the length (18) of the tool bar (2) and comprises a pair of positioning means that can be brought into engagement with the positioning elements in the respective tool position (19, 20).
